

Dolly × AdventureX 2026

Track strategy · Jeboy, Nero, Ceaser Zhao · Max 6 tracks per project

STAGE 1	Fri Jul 25 · 2:00 PM	Team + track choices + THEME + topic. Locks our slate.
STAGE 2	Sat Jul 26 · 1:00 AM	Full project + docs. Build ends the 24th; the 25th is polish and submit.

ALL 22 TRACKS AT A GLANCE

Every track, one line, one grade. Full reasoning in the tier pages that follow.

GRADE	TRACK	ONE-LINE SUMMARY
A+	Dimensional	Physical agents acting in the real world. Dolly's pitch, verbatim.
A-	bilibili live	Biggest relevant pool, our exact audience. Costs integration hours.
B+	superun.ai	"Closest to the problem beats best coder." Our founder story, free.
B+	AI Native Youth	Rewards being the only. Our moat slide, plus the Nero angle.
B	Qoder	Build-tool lottery ticket, 20k first, if adoption costs nothing.
B-	Kiro / Amazon Quick	Same idea as Qoder, smaller pool. Backup only, never both.
B-	Photon messaging	"Dolly texts you the edit." Slate slot 6: tiny cost, real synergy.
C+	Zilo ring	REQUIRES their ring as core interface. Off the slate; upgrade path only.
D	Injective blockchain	100k crypto pool. Wrong sport; bolted chains read as pandering.
D	PICO OS spatial	Headset-native builds. A VR viewer costs days for a gimmick.
D	D-Robotics	Dimensional's story but on their robotics platform. Redundant.
D	Tuya	Their dev-board ecosystem; our hardware is DJI and phones.
D	AgileX robotics	Teach a robot arm. A different project entirely.
D	viaim / iFLYTEK	Earbud-resident agents. Wrong body for Dolly.
D	miHoYo publishing	Redo game publishing with AI. No overlap.
D	PandaAI Trading	Finance agents. No overlap.
D	Du Xiaoman	AI wealth advisor. No overlap.
D	StepFun frontend	Self-evolving frontend codegen. Our frontend is a means.
D	Miaoda aesthetics	Judged via their no-code platform. Wrong toolchain.
D	Blue Box rest	Reinventing rest. Charming, unrelated.
D	WOPC culture export	China-brand commerce storytelling. No overlap.
D	Xiaohongshu BiP	Smallest pool. Free build-log posts at most, never a slot.

A = go (primary homes) · B = cheap extras (near-free entries) · C = garnish (only if time appears) · D = skip (wrong sport). Detail cards from page 4 share one anatomy: Why it fits · Watch out · Cost · Our move.

OUR 6-TRACK SLATE

One build, six tickets. First prizes in reach: 67,000+ RMB plus Photon's unlisted prizes. Zilo benched: A-grade fit, but a new SDK + BLE surface mid-hackathon is risk we don't need.

TRACK	ROLE	COST	1ST PRIZE	CONFIRM FIRST
1 · Dimensional	Primary home	~1h	15,000	Embodiment qualifies?
2 · bilibili	Biggest pool	4-6h	10,000	Light integration OK?
3 · superun.ai	Free narrative entry	0h	10,000	Platform optional?
4 · AI Native Youth	Uniqueness story	~1h	12,000	None
5 · Qoder	Process lottery ticket	~2h test	20,000	Test drive smooth?
6 · Photon	Product-synergy bolt-on	2-3h	TBD	Core demo done by 24th?

THREE DECISION GATES

JUL 23 · EVENING	JUL 24 · END OF DAY	WHEN THE FORM OPENS
Photon go/no-go: core demo on schedule? Behind = swap slot 6 to Xiaohongshu build-log posts (~0h).	Slate + theme locked. Nothing new enters the build after tonight.	Submit Stage 1 immediately. Never near the critical path.

FALLBACK SWAPS

Zilo upgrade path	Only if a dev ring lands by Jul 23 AND the engineers volunteer: swap Photon out for Zilo. The fit is A-grade; the SDK risk is why it sits on the bench.
bilibili wants heavy integration	Drop it. Never trade demo hours for a ticket.
Dimensional demands raw actuation	bilibili becomes primary. Zilo re-enters the conversation only with a ring already in hand.
Total slate cost	~1.5 engineer-days + 2h of writing. The rest is the Dolly build we were doing anyway.

Theme pick

Stage 1 asks for a theme alongside the track. Ranked for Dolly; judges score how well the project expresses the theme, so fit beats cleverness.

VERDICT	THEME	WHY / WHY NOT
PICK	Kaleidoscope	Near-literal fit, zero explanation needed. A kaleidoscope turns many fragments into one image; Dolly fuses many camera angles into one edited story. The demo enacts the theme live on stage: three lenses, one story. Even the multicam grid view looks like one. Risk: a popular pick, but themes are judged on expression, not scarcity, and nobody expresses it more literally than us.
BACKUP	Reverse	The inversion is real and layered: editing decisions move from after the shoot to during it, the crew is now the intelligence while the human just performs, and "your first hire" logic is flipped. Strong story, but it needs a sentence of explanation where Kaleidoscope needs none.
STRETCH	Pawn	The promotion angle: the solo creator is the board's weakest piece doing every job, and Dolly promotes the pawn to play like a full team. Clever, but it requires chess literacy, a paragraph of setup, and it centers the user's weakness rather than the product's magic.
STRETCH	.xyz	Best reading for us: cameras positioned in x, y, z space, a studio at any coordinates. Cute but thin; judges will likely expect web-native or "anything goes" interpretations, and Dolly gains nothing from the frame.
SKIP	8Bit	Retro-pixel aesthetic is the opposite of our promise. Dolly sells cinematic, production-team quality; wrapping it in lo-fi nostalgia actively undermines the positioning. Only usable as a visual skin, which is the weakest way to express any theme.

OUR CALL: Kaleidoscope, with Reverse as the fallback if the track doc reveals a theme quota or judging twist. Submission line: "Many lenses, one story. Dolly turns fragments of coverage into a single finished picture, live." Lock the theme with the slate on Jul 24.

Bonus: Kaleidoscope hands the brand team a free visual language: fractured multicam frames resolving into one clean image works for the deck cover, the demo interstitial, and the logo reveal.

TIER S · PRIMARY HOMES

S1 · S · Dimensional · Physical Agent

Pool 30k · 1st 15k · +5k Audience

WHY IT FITS

Agents that perceive and act in the real world: that is Dolly, verbatim. We demo live in physical space while rivals bolt motors onto chatbots. Commanding a real DJI camera plus our BLE protocol work is credible hardware depth. The audience award suits a crowd-pleasing demo.

WATCH OUT

One definitional risk: if "physical agent" strictly means the agent drives motors itself, we lean on the BLE evidence and the camera's physical tracking under Dolly's direction.

EXTRA BUILD COST

~1 hour (one Q&A; slide)

OUR MOVE

Enter as PRIMARY. Prep the one-liner: "ActiveTrack is the muscle, Dolly is the nervous system."

TIER A · STRONG SECONDARY

A1 · bilibili live

Pool 48k (largest relevant) · 1st 10k

WHY IT FITS

The audience is literally our persona: the solo UP zhu who films and edits alone. "AI plays for content creation" fits Dolly without stretching. The biggest relevant pool of all our candidates.

WATCH OUT

Likely expects platform integration; account setup plus API work in China week competes with the core build. A broad track means heavy competition.

EXTRA BUILD COST

~4-6 hours (publish-to-bilibili step)

OUR MOVE

Enter only if the track doc confirms light integration qualifies. Minimum version: the pipeline's final step publishes the draft cut.

TIER B · FREE OR NEAR-FREE ENTRIES

B1 · superun.ai · Context to Code

Pool 30k · 1st 10k

WHY IT FITS

Their judging lens, "closest to the real problem beats best coder," is Jeboy's founder story: he runs the production agency Dolly replaces. A pure narrative entry.

WATCH OUT

If superun tooling is required, the cost jumps and we drop it. May favor non-engineers building on their stack.

EXTRA BUILD COST

0 hours (skip if their platform is mandatory)

OUR MOVE

Enter if platform-optional. The submission essay writes itself.

TIER B · CONTINUED

B2 · AI Native Youth · "Don't be first, be the only"

Pool 30k · 1st 12k

WHY IT FITS

Rewards uniqueness, and "nobody owns the capture moment" is already our differentiation slide. An education sponsor plus Nero shipping products at 15 is a genuine angle.

WATCH OUT

Judging may skew toward youth and learning stories rather than product depth.

EXTRA BUILD COST

~1 hour of narrative tailoring

OUR MOVE

Enter. Nero fronts this track's submission narrative.

B3 · Qoder (pick over Kiro)

Pool 40k · 1st 20k · Kiro alt: 30k/15k

WHY IT FITS

Pays for HOW we build, not what. If the engineers adopt it as their coding assistant, it's a lottery ticket on the event's second-biggest first prize. Alibaba home turf means real on-site support in Hangzhou.

WATCH OUT

Proof-of-usage requirements unknown. Tool-switching mid-hackathon is friction. Claiming both Qoder and Kiro is not credible: pick exactly one.

EXTRA BUILD COST

~2h test drive, then 0h ongoing

OUR MOVE

Nero test-drives Qoder for one evening. Smooth = slot 6. Friction = drop it or swap to Kiro.

TIER C · GARNISH, NEVER A HOME

C1 · Photon messaging

2 prize groups shown · amounts unclear

WHY IT FITS

"Dolly texts you when your edit is ready; reply to request changes" is on-brand and genuinely useful for a walk-away product. Small integration via their Spectrum API.

WATCH OUT

Their thesis is agents living inside messaging channels; Dolly is not that. Tiny prize surface. It lost the six-slot math to bigger tickets.

EXTRA BUILD COST

~2-3 hours, last day only

OUR MOVE

SLATE SLOT 6. Build only after the core demo works: an outbound 'your cut is ready' message via their Spectrum API. Schedule slips = swap to Xiaohongshu build-log posts.

C2 · Zilo Whisper ring · upgrade path only

Pool 30k · 1st 10k · **REQUIRES** their ring

WHY IT FITS

IF we had the ring working, it would genuinely improve Dolly: wrist mic + physical button beats far-field voice on a loud stage, and thin competition means many prize slots.

WATCH OUT

The track **REQUIRES** their ring as the core interaction, a hard hardware dependency we would be building around, not building on. Judges grade the ring experience, not the film crew. New SDK + second BLE surface mid-hackathon. Dev-unit access unconfirmed.

EXTRA BUILD COST

~1 day of SDK work, on unfamiliar hardware

OUR MOVE

Off the slate. Reconsider only if a dev ring physically lands by Jul 23 **AND** the engineers volunteer **AND** the core demo is ahead of schedule. Three **ANDs** on purpose.

TIER D · WRONG SPORT: SKIP

TRACK	PRIZE	WHY WE SKIP
Injective blockchain	100k pool	Biggest money = the trap. Crypto-native teams fill it; chain-on-Dolly reads as pandering.
PICO OS spatial	50k pool	Headset-native development. A VR viewer is a gimmick that costs days.
D-Robotics embodied AI	5k first	Same story as Dimensional but demands their robotics platform.
Tuya	7k first	Their dev-board ecosystem is the point; ours is DJI and phones.
AgileX robotics	5k first	Teach-a-robot-arm track; a different project entirely.
viaim / iFLYTEK earbuds	5k first	Agent skills living in earbuds; wrong body for Dolly.
miHoYo publishing	10k first	Redo game global publishing with AI; no overlap.
PandaAI Trading	10k first	Finance agents; no overlap.
Du Xiaoman	10k first	AI wealth advisor; no overlap.
StepFun frontend factory	15k first	Self-evolving frontend codegen; our frontend is a means, not the product.
Miaoda aesthetics	10k top	Judged via their no-code platform; wrong toolchain.
Blue Box · Hack the Rest	10k first	Reinventing rest; charming, unrelated. Ironic for our July 25.
WOPC culture export	15k gold	China-brand culture commerce; no overlap.
Xiaohongshu Build in Public	10k pool	Smallest pool; passive build-log posts only if they qualify for free. Not a slate slot.
