

Dolly x Insta360

Sponsor hardware proposal, AdventureX 2026, Day 1. Prepared by Jeboy for Nero and Ceaser.

The pitch line: "Dolly turns a stack of Insta360 devices into an autonomous film crew." Same product, stronger story, sponsor-aligned.

Why consider switching from the DJI Pocket 4

Our hero cam requirement is simple: USB video into OBS with reliable AI subject tracking. Right now we get there by pushing the Pocket 4's ActiveTrack through webcam mode. Insta360's Link 2 Pro is a purpose-built AI tracking webcam, so it does exactly this natively over UVC with zero hacks. That removes an entire failure point from the demo.

Beyond the hardware fit: Insta360 is a sponsor in the room. Building on their gear typically unlocks a sponsor track prize, loaner equipment, and booth engineers we can actually talk to. They also run a developer program, which gives Ceaser a path to programmatic camera control instead of black-box on-device AI. And since Insta360 and DJI are direct rivals, pitching a DJI-based rig at their event is a missed opportunity.

The risk, and how we manage it

We have already tested the Pocket 4 workflow, and swapping hero cams mid-hackathon is a real risk. Plan: borrow a Link 2 Pro today, test it into OBS tonight, and keep the Pocket 4 as fallback. If tracking latency is good, we switch. If not, we still use Insta360 gear for the secondary angles and audio, and we lose nothing.

What we ask the booth to lend us

Device	Role in Dolly	Why
Luna Ultra	Hero camera	Their brand-new flagship gimbal camera, 8K, Leica co-engineered, 3-axis stabilized. Direct Pocket 4 competitor, so they will want it demoed.
Link 2 Pro	Backup hero / tracked secondary	Purpose-built AI tracking webcam. Plug-and-play USB into OBS, our lowest-risk path.
2x Ace Pro 2	Static wide angles	Replaces our two phones. Leica lens, 8K AI chip, far better low-light than phone cameras under venue lighting.
Mic Pro	Voice commands + transcription	Three-mic array with NPU noise reduction and Direct Connect to their cameras. Cleaner input for "Dolly, action/cut" and Whisper.

Full Insta360 lineup (mid-2026)

Everything they currently make, so we know what is on the table when we ask.

360 cameras

Insta360 X5	Flagship 8K 360 camera, strong low light, AI-assisted editing.
Insta360 X4 Air	Lighter and cheaper 360 option.
Insta360 X4	Previous-gen 8K 360 camera, still widely considered best in class.

Action and pocket cameras

Ace Pro 2	Flagship action cam. Leica lens, dual 8K AI chip. Our wide-angle pick.
Ace Pro / Ace	Previous-gen action cams, 4K120, strong low-light PureVideo mode.
GO Ultra	Ultra-compact 4K pocket camera with extended battery.
GO 3S / GO 3	Thumb-sized magnetic wearable cameras.
ONE RS	Modular action cam with interchangeable lenses, including a 360 lens.

Gimbal cameras and phone filmmaking

Luna Ultra	New flagship dual-lens 8K gimbal camera, Leica co-engineered, 3-axis stabilization, telephoto. Their Pocket 4 rival.
Luna Pro	Single-lens Luna. 1-inch sensor, F1.8, 10-bit color.
Flow 2 Pro / Flow 2	AI tracking smartphone gimbals, recently updated software.

Audio

Mic Pro	Flagship wireless mic. Three-mic array, NPU noise reduction, customizable E-Ink display, Direct Connect to Insta360 cameras.
Mic Air	Smaller, simpler predecessor.

Webcams (conferencing line)

Link 2 Pro / Link 2C Pro	New flagship AI tracking webcams. UVC over USB, gimbal tracking. Best fit for our OBS pipeline.
Link 2 / Link 2C	Standard versions of the same idea.

Drone and enterprise

Antigravity A1	World's first fully integrated 8K 360 drone, incubated by Insta360. Long shot to borrow, insane demo shot if we can.
Enterprise / VR	Virtual Tour Kit, Construction Kit, 8K VR Livestreaming Solution, Pro 2 and Titan VR rigs. Not relevant for Dolly.

Next steps (today)

1. Jeboy talks to the Insta360 booth, asks about a sponsor track and hardware loans, and requests the four devices above.
2. Nero tests Link 2 Pro into OBS tonight and measures tracking latency against the Pocket 4 baseline.
3. Ceaser checks the Insta360 developer program and SDK docs for programmatic camera control and framing

metadata.

4. Go/no-go on switching hero cams by tomorrow morning. Pocket 4 stays packed as fallback either way.
